

Develop a program that will help manage an inventory of books for a bookstore.

The program should:

- **Maintain a collection/array** of book entries that contain specific information about each of the books.

This information should include:

- Title
- Author(s)
- Publication date
- ISBN (International Standard Book Number)
- Retail Price
- Quantity in stock
- **Provide a console interface** for working with the inventory that allows for:
 - **Adding, editing, deleting, and displaying** detailed information about the books in the collection/array.
 - The **detailed display** should include:
 - Title
 - Author
 - Publication date
 - ISBN (International Standard Book Number)
 - Retail Price
 - Quantity in stock

This program will assist in managing book inventory by providing data storage, data retrieval, and data manipulation. It should provide detailed information about each book item, encouraging better organization and accessibility.
